

Intellidimension Announces new Semantic Web Technology Partnership with Matrikon

Brattleboro, VT – April 6, 2010 - Intellidimension, Inc. a leading provider of Semantic Web infrastructure technologies announced today that it has entered into a multi-year technology partnership with Matrikon (TSX:MTK). Matrikon's Intuition Program incorporates Intellidimension's Semantics.Server and Semantics.SDK and delivers industrial intelligence in a revolutionary way – providing context to enable all people, processes and applications to work in concert. This empowers collaboration across departments and functional areas, geographic boundaries, languages and currency and enables industrial clients to achieve operational excellence by automating action.

As a company with 10 years of experience developing Semantic Web technologies, Intellidimension offers robust tools that can scale to manage massive data sets. “We selected Intellidimension as our Semantic Web technology partner because they offer a platform that can scale with the information management needs of our customers while providing a high level of performance,” said Peter Lawrence, Chief Technical Officer. “Intellidimension has been an excellent technology partner in supporting our development of this key initiative for Matrikon. The semantic model allows multiple data relationships, which better reflect the interdependencies of a real plant model - a key component of Matrikon's next generation technology.”

Intellidimension co-founder Geoff Chappell commented, “Matrikon is an ideal partner for our company. They have embraced the power and potential of Semantic Web technologies and can leverage our 10 years of Semantic Web development experience to deliver an enterprise class solution that is more flexible and costs less to maintain than traditional relational database technologies.”

For a free evaluation version of Semantics.Server go to:
